rna binding protein apobec-1 complementation factor

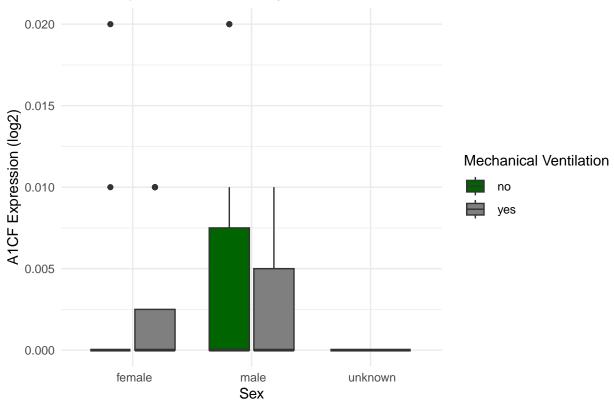

```
#explanation: Gene AICF and Covariate Age: doesn't seem to be a strong relationship visually between a
  #and the A1CF expression values, although the data is a little bit sparse.
  \#A1CF expressions are somewhat quantized at 0 and .01 (log2). definitely more values at 0.
  # more analysis of other genes, covariates needed. no linear regression here,
  #but fairly visually obvious a lack of correlation
# boxplot params opt: outlier.shape = 21, outlier.size = 2, alpha = 0.8
#3: Boxplot of gene expression
#separated by both categorical covariates (sex, mechanical_ventilation(1st))
